1. COMPETENCES

ACIS's competences cover the various **knowledge chain value** stages.

Management that includes these stages, and is based on **collaboration, participation and an innovative vision**, favours knowledge being circulated from the first stage to the last one, as well as:

- Generating knowledge in health centres, coordinating and planning research.
- Disseminating the knowledge amassed by our professionals through innovative training.
- Analysing and summarising knowledge in health technologies by thorough assessment.
- Transferring knowledge in the health system and to society through innovation.
